Developed by Airport Planners, for Airport Planners

AVIATION NEWSLETTER

AUTUMN EDITION 2018

Fall has arrived in Northern Europe after an unusually warm and sunny summer in Sweden! With our batteries charged we're ready to bring you lots of interesting Aviation webinars, events and content. First up is our latest addition to the Transoft Solutions’ family - AirTOP. Join us in September for an introduction webinar on what this software is all about, guided by three of our Aviation experts. Don't forget to follow us on the Aviation Forum on LinkedIn to stay in the loop!

Gate-to-gate simulation with AirTOP

With the recent acquisition of Airtopsoft we're welcoming the AirTOP simulation suite to the Transoft Solutions' product family. AirTOP is the only end-to-end solution covering the model of airports, the flow of passengers and ground vehicles, the movement of airplanes from gate to gate as well as in the airspace. It is a comprehensive modular solution for fast time simulations and optimization requirements. Current users of AirTOP include Air Navigation Service Providers (ANSP), Airport Authorities, Airlines, Research Labs and Consulting companies.

The Airtopsoft team of talented and highly qualified developers are based in the heart of Europe in Brussels, Belgium. Innovation is driven by a unique combination of research and development, software engineering methods and customer insights. The company was founded in 2006 by current CEO Thierry Salvant, at the time with only three employees developing the AirTOP software from the ground up, literally. The AirTOP roadmap is determined by its users. A formal process for this on-going dialogue was implemented as early as 2008 and has proved a success. As with all Transoft Solutions’ software the input from our users is very valuable and serves as both base and inspiration for further development.

Since 2014, the focus has been on enriching the AirTOP product line with two new modules; an airport terminal module allowing for the modelling of passenger movement within the airport terminal and a runway capacity analysis module. In this time-frame another important launch was made - WiZer. A new disruptive product that enables real-time decision-making based on live airplane data and background AirTOP fast-time simulations.

The AirTOP interface has been specifically designed to reduce the time needed to set up and debug simulations, to achieve faster results and better cost efficiencies. Take a closer look at this advanced airspace and airport modeling software in our upcoming Live Webinars. Dates and times for your region will be announced on the Aviation Forum. Can't wait until then to learn more? Visit airtopsoft.com or contact us at infoAviation@transoftsolutions.com and we'll be in touch shortly.

A WORD FROM DEVELOPMENT

“Busy months ahead for the developers with new releases for ArcPORT and AviPLAN around the corner. The ArcPORT release will include improvements based on user requests, amongst others concerning the target Level of Service. The AviPLAN update will incorporate the new ICAO guidelines that are expected to be officially confirmed mid November.”

Ben van Leest, Vice President Aviation

Meet the Aviation Team

In 1999, Ben van Leest, joined Simtra in Sweden and used his experience to contribute to the development of the PathPlanner software and setting up the training program. When Simtra was acquired by Transoft in 2014 Ben became responsible for the Aviation portfolio as Vice President for Aviation.

What’s your expertise?
I’m experienced in AviPLAN and SkySAFE and have been doing a great number of public and on-site training sessions but in my current position there is ample time for that, my product managers are doing that now much better!

What’s the challenges for airports today?
A major challenge for many airports is to cope with the growing traffic volume without too many possibilities for expansion. Our ArcPORT and AirTOP capacity software packages provide solutions to analyse and optimize.

A tip for our software users?
In the latest version of all AviPLAN products you can now create your own vehicle service arrangement for an aircraft type and store it for repeated use. Very handy, realistic, and good to enter into this level of detail when the area on the aircraft stand is limited.

We would like to take this opportunity to invite you, as a Transoft Solutions Aviation’ software user, to our upcoming User Group meeting in New York. This is the perfect forum to share your experiences, discuss industry trends and best practices and of course an opportunity to meet with your industry peers.

Location: New York, USA
Date: 4 October, 2018

Keep an eye out for the detailed agenda that will be shared shortly. We hope to see you in New York. Welcome!

### A Global Presence

Transoft Solutions is growing and new offices are continuously added to our already global presence. The most recent addition being the Airtopsoft office in Brussels, the Netherlands. With offices all over the world there’s of course another benefit that comes with it, our colleagues speak a number of different languages giving us the opportunity to offer our users support and training in their native tongue. We’re proud to be able to say that our users are spread out in over a hundred countries on all continents. It’s an amazing Aviation community that we hope to bring together in places such as the Aviation Forum, meet out on exhibitions, engage with in training sessions and share experiences with whenever we can. Contact us on infoAviation@transoftsolutions.com to learn more!
